Profile:

I have been a **Senior Web Developer** for Knox County (Tennessee) Government since December 2020, working with Vue, Laravel/PHP and AWS services to build web applications that connect citizens with local government services.

Previously I was a **developer** on the UI team at **iXsystems** from 2018-2020. Our team used Angular and all the related technologies to build the user interface for [TrueNAS](#), the open-source operating system for network attached storage.

Before this, I worked in church ministry for many years at a mid-size church where I learned skills in leadership, mentoring, dealing with people, etc.

My technical training comes from **two intensive online training programs** (through Coursera and Udacity) and **thousands of hours** invested in **short-term online classes and development projects**. I am highly disciplined and driven to produce **clear and functional code** resulting in clear and functional apps.

I'm currently the sole developer of [the website for The Alliance for Creative Excellence](#) in Knoxville (aceknox.com). The site is built with Angular and the Material UI components.

[Here's a simple site](#) I built in Python/Flask which draws data from a public API (it takes a second to wake up).

RECENT TECHNICAL TRAINING

Courses completed in 2021 at Udemy

- [Vue JS Essentials with Vuex and Vue Router](#)
- [Creating Accessible Websites](#)
- [AWS Serverless APIs & Apps - A Complete Introduction](#)
- [100 Days of Code: The Complete Python Pro Bootcamp](#) (nearly completed)

I also completed many courses at [Vue Mastery](#)
